EXPERIENCE

Technical Product Manager <i>Tempo Labs (YC23)</i> - Deployed a multi-agent orchestration system with Claude-powered sub-agents (PRD, user flow, UI spec generators, client profiler) grounded in repos and meeting transcripts, reducing feature-to-design time by 70% - Built an internal ops platform used daily across the company to manage 30+ clients and 50+ engineers—unifying capacity planning, client health tracking, and automated GitHub activity tracking, scoring and summarization, enabling org-wide visibility	Nov 2025 – Present Toronto, ON
Lead Software Developer (Contract) <i>Duration Growth Advisors</i> - Architected and built a venture debt firm's underwriting platform from scratch as the sole developer, cutting 2 days of analyst work per deal to under 5 minutes - Built ingestion pipelines for 2–10 years of historical financials and customer MRR data, automatically generating cohort analyses and SaaS metrics for every deal - Deployed AI agents that scrape LinkedIn and company websites to profile founders, score their readiness for debt, and match them with investors	Jan 2026 – Jul 2026 Toronto, ON
Software Engineer <i>Flowmatic</i> - Launched an OpenAI-driven email composer that pulls invoice, contract and customer data, cutting rep prep from 30 min to 1 min and standardizing customer outreach - Deployed a PostgreSQL MCP server on AWS Lightsail Containers, enabling natural language to query data in tabular and graphical formats, powering self-serve analytics - Built an anonymized PostgreSQL demo environment, enabling realistic product demos without violating customer-data compliance	Nov 2024 – May 2025 Toronto, ON
Software Engineering Intern <i>Zynga Inc. – Analytics</i> - Built a React+Python analytics plugin that lets game-team analysts run player segmentation and visualize experiment KPIs—now used daily on <i>Harry Potter: Puzzles & Spells</i> and <i>Words With Friends 2</i> - Supported the migration of a legacy ETL service to a lower-cost architecture; added granular Airflow logging and built a Splunk dashboard from scratch to surface real-time pipeline-health alerts—eliminating idle compute and saving \$250 K in YoY AWS spend	May 2024 – August 2024 Toronto, ON
Software Developer Intern <i>Repwave</i> - Collaborated with a senior Salesforce engineer to plug an OpenAI meeting-insights micro-service into our Flask/FastAPI backend; enabling auto-generated summaries and action items that cut reps' follow-up prep time - Created UX flows from Figma wireframes to production UI—ran five usability tests that cut task completion time by 30%	Nov 2023 – March 2024 Remote

EDUCATION

Western University & Ivey Business School <i>BESc, Software Engineering & HBA, Business Administration (dual degree)</i> GPA: 3.9 (Eng), 3.7 (HBA)	London, ON
--	------------

PROJECTS

Atlas Code – Technical Debt GitHub App Install <i>GitHub Apps, Supabase, TypeScript, AI Agents</i> - Built an AI GitHub App that scans for technical debt and auto-opens PRs with fixes for security, DRY, and maintainability issues - Deployed specialized sub-agents that analyze every push to main, tracking issues in Supabase and auto-resolving upon merge	January 2026
London Delays – 1 st Place, Western SE Capstone Demo <i>Docker, Express, MongoDB, Grafana</i> - Built a real-time ETL service that streams weather and traffic feeds (1k+ events per min) into MongoDB for sub-200ms look-ups - Integrated a TensorFlow delay-forecast micro-service, pulling predictions and piping results into Grafana for live visualization	Fall 2024 - Spring 2025

TECHNICAL SKILLS

Languages: Java, Python, Javascript, Typescript, Go, C#, SQL, NoSQL, HTML, CSS
Frameworks: React, Next.js, Node.js, Flask, Django, FastAPI, SpringBoot, JUnit
Developer Tools: Git, Docker, Kubernetes, Terraform, Airflow, AWS, GCP, PostgreSQL, MongoDB, Supabase, Splunk, DataDog, GitHub Actions
